

## **God's Creation Centre!**

**Year 8 Pupils attending a curriculum enrichment day for Religious Education were asked as one of their activities to create a new creature for the world. It was not possible to create all the amazing designs but below follow the names and a brief explanation of the creatures!**

**Gorribian – The Gorribian lives on the edge of the Sahara desert during the day and travels to and from the Indian Ocean to collect water in order to survive in the desert. It has 3 humps to store 500 litres of water. It eats fish and has three legs and a short neck. It has dragon shaped wings which flap 5 times a second.**

**Linditoria – the creature from heaven. This creature is a marvel of goodwill. It empathises with other humans and creatures and always has a smile to give for the world to see. It is very religious and abides by all the Ten Commandments. It takes the word of the Bible and regularly volunteers for charities. It has a handsome happy face with soft features. Its body language is always welcoming and Linditoria sees the good in everyone. Linditoria doesn't acknowledge the technologies going on in day-to-day life and prefers to live a quiet life underwater. She came down from heaven recently to spread the message of goodwill and love, if you wish to receive it.**

**Bob, the Environmentally friendly thing – Bon breathes in Carbon Dioxide and breathes out oxygen. He has 7 arms to do more and is a vegetarian. Seeds fall out of one set of arms and water falls out of the other. His hands are magnetic with spikes to pick up rubbish. He can survive in any environment. He has a life span of 120 years.**

**The Biofly – the Biofly eats pollution by using its two heads. Once eaten, he changes the pollution into clean air. It is 3 metres tall and weighs the same as a jumbo jet. It can see an aeroplane coming from 500 metres away and get out of the way in time. When it dies, it turns into dust that plants grow out of!**

**Kattox Montimas – commonly known as Kattox. The Kattox can be found in Hawaii and Jamaica and lives in grass. It eats flies and insects through a tube. It also stores food in a pouch. It can hold its breath for 173 hours and it weighs 11 stone and is half a metre high. It has flippers to swim with and wings for flying. It has feathers and fur that moult when it wants to. It likes lots of friends and is very kind. It lives forever.**

**The Shplanti – This creature has a lifespan of 200 years and eats litter. It can survive in any environment and uses up carbon dioxide and then creates extra food. It can hear a mouse squeak up to a mile away. It has furry and clawed arms to pick up rubbish and an all seeing eye to see all of the rubbish. It has two heads and a short tail.**
